PROFESSIONAL SUMMARY

AI Software & MLOps Engineer with 5+ years of enterprise experience specializing in backend modernization, cloud infrastructure (Kubernetes/AWS), and secure pipeline automation. Leveraging a strong SecOps and backend engineering background to build deployable, resilient, and production-grade AI applications. Passionate about bringing rigorous software engineering practices to MLOps pipelines and scaling intelligent systems securely.

TECHNICAL SKILLS

- **AI & Machine Learning:** Python (PyTorch, TensorFlow), LangChain, ChromaDB, Hugging Face, OpenAI API.
- **Engineering & MLOps:** Docker, Kubernetes (AKS/EKS), MLflow, Apache Airflow, FastAPI.
- **Backend & Databases:** Java (Spring Boot), SQL, C#, JavaScript, PHP.
- **Cloud & Security:** AWS (Lambda), Azure, SecOps, HashiCorp Vault, REST APIs, Microservices.

EDUCATION

- **MLOps - Machine Learning Operations** | Duke University | Present
- **Artificial Intelligence Specialist Diploma** | GRAN | Present
- **Google AI Professional Certificate** | In Progress
- **Systems Analysis and Development Diploma** | UNINASSAU
- **Computer Programming** | Georgian College
- **Specialization in IT Management** | Gran Concursos

SELECTED AI APPLICATIONS & MLOPS PROJECTS

- **Production-Grade RAG Document Assistant:** Architected a deployed, end-to-end Retrieval-Augmented Generation system utilizing LangChain, ChromaDB, and FastAPI. Containerized the application with Docker for scalable deployment, enabling secure, natural language querying of enterprise documents.
- **Autonomous Data Analysis Agent:** Developed an agentic workflow tool designed to bridge analytics and enterprise security. Leveraged LLMs to automate data exploration and implemented robust guardrails to ensure output reliability and system integrity.
- **Enterprise Vulnerability Management Pipeline:** Architected an automated data ingestion and vulnerability management pipeline utilizing Python, SQL, Apache Airflow, and REST APIs, reducing manual workload by hundreds of hours annually.

WORK EXPERIENCE

RBC - ROYAL BANK OF CANADA (Capital Markets) | Senior Java Developer | Montreal, QC | Apr 2024 - Apr 2025

- Architected an internal API "AI Gateway" using Java Spring Boot, enabling over 10 internal teams to securely consume services with built-in data redaction and rate limiting.

- Led the legacy modernization of monolithic settlement systems, migrating them to a microservices architecture on AKS and integrating Istio Service Mesh to manage traffic routing.

RBC - ROYAL BANK OF CANADA (Technology & Operations) | SecOps Engineer | Toronto, ON | Jan 2022 - Apr 2024

- Built an event-driven orchestration layer using Apache Airflow and AWS Lambda to automate vulnerability management and streamline data processing.
- Engineered automated Python and SQL data pipelines that prioritized infrastructure threats, reducing Mean Time to Remediate (MTTR) by 60%.
- Developed backend Python bots that automatically detected and corrected misconfigured cloud resources in real-time.

MUNICIPALITY OF YORK REGION | Statistical Data Analyst | Newmarket, ON | Jan 2021 - May 2021

- Developed automated data pipelines and secure ETL processes for sensitive data to feed real-time insights to external dashboards.
